

ARLO PORTABLE BASE STATION

A simple but very effective way of catching events when they happen. View live anytime and receive instant email or mobile alerts whenever motion or audio is detected.

Enjoy a professional and free cloud service that stores your video events from the past 7 days and the plan will never expire. We have packed all this tech into one case, making it simple to deploy when required.

A maximum of ten cameras can be connected to the case. The camera will only connect to the synced base station. We have placed a sync button on the case for you to add further cameras at any time, you can also delete cameras from the base station if required via the APP.

Each camera has its own rechargeable battery and extra batteries can be purchased from Arlo. The battery life can last up to 3 months, this depends on how much you live stream or how frequent motion events occur. You can also change the recording time from 0-300 seconds when events occur.

Place your own data sim card inside the case and switch on, its that simple. We can even supply you with a fully European roaming sim card inside for your data. We make sure all is working and checked before the unit is dispatched.

HOW DOES IT WORK

Cameras: The complete case can be placed or hidden up to 100 meters away from the cameras, this ensures a good strong meshed signal from each camera. The individual camera signal strength and battery percentage is also displayed on the APP.

The cameras have their own battery inside and they are charged via the supplied camera charger.

They are robust and will withstand harsh weather conditions, they are also waterproof. Arlo offer many types of cameras ranging from 1080 picture quality up to 4K. Any of the Arlo range can be synchronised with the case, in some cases you may not require such a high definition camera in a certain place, so its great to use various types with a single portable base station.

The Camera Battery: This battery is also removable, so you can quickly replace the battery if required. Charging time is around 4-5 hours

Camouflaging: Arlo offer a great range of skins for the cameras. Depending on the type of operation you have, you can choose and purchase the skin of your choice.

Magnetic Mount: The Arlo cameras are secured via a magnetic ball; this allows you to place the camera more precisely in the direction of the view you wish to control. These types of mounts are widely available and easy to attach to the camera.

THE PORTABLE BASE STATION

A robust and standalone base station that is simple to use and control. It allows you to Synchronise up to ten cameras to the case.

FEATURES:

Internal GPS: This allows you to track the case live from one second intervals. You can also ARM the case and be informed if it is moved.

Remotely switching the case on/off: The ability to remotely switch the case on or off is a brilliant feature, this also enhances battery life, especially if the case is not required to be on at certain times.

Battery Indicator: The case has a simple push button that will display the battery percentage.

Synchronize camera button: Syncing your cameras to the case is very simple. Push the button on the case and at the same time, push the button down on the camera.

Lithium-ion batteries: The case is fitted with 77Ah quality batteries, this ensure a battery life between 7-9 days, however this can be extended if the case is remotely turned off at certain periods.

Viewing battery life remotely: The tactical tracking APP from gotek7 allows you complete control over the case remotely and the ability to view the position and the battery percentage at all times.

External Charging: The base station can be charged via a vehicle or a power pack supplied by gotek7. It can also be charged via 110-240V. The correct mains charger is supplied with the base station.

USB Flash Drive: All footage is stored in the cloud; however, you also have the option to also store the information on external storage.

Viewing your Cameras via the Arlo APP

Easily control and interact with all your Arlo products

Safely store your videos and audio recordings and view from anywhere

Get alerts for what matters and filter out what doesn't

Simple to use: The APP is very simple to use; it allows you to ARM your cameras for motion or even audio. You can make many changes, like sensitivity on motion and light and much more. You can also inform the camera to only alert you if either people/vehicles pass near the camera, another great feature is to inform the camera not to alert if any animals pass the camera, this could save many alerts if being used out in the field.

Playback: Viewing your video footage is simple. They are listed on the APP with a precise time and date. Remember you can choose how long you want it to record when a motion occurs, from 10 seconds to 3 minutes, or however long the motion activity lasts.

Activity Zones: This is a great feature for placing the camera with an environment that might be busy with people or

activity. It allows you to place and move a zone on the APP, if someone moves within this zone, like a person. Then the camera will alert you and send all the footage to the cloud within seconds

Creating your own custom alerts: You can create your own custom alerts for specific cameras. For example you may not want to be alerted when motion occurs on a certain camera, but you want it to record the footage for you to view later, but on certain cameras you want to be alerted, having this freedom to make these choices are great.

Cloud based and secure: All footage from the base station are placed securely on the net gear servers. Fast and reliable ensures a powerful and secure service. You also can store the footage on the external hard drive on the base station for back up if required.

Push Alerts are responsive and quick: Using Arlo you will find that alerts are extremely quick, it normally happens within 3-6 seconds, a very reliable way of being informed once some type of activity occurs.

Viewing and controlling your Arlo's Cameras via a PC: This is very simple, and you have all the functions at your fingertips from your PC or MAC. You can view your cameras live at any time and view any previous footage.

Summary

A complete and robust system that informs you if any motion occurs, the ability to be informed instantly and either view live or view the footage later is remarkable. The fact that you can place up to ten cameras and receive all various angles of the footage from different camera's is also a huge benefit against other systems.

Powerful and reliable and the ability to have complete control remotely are just some of special attributes that makes this Portable Arlo System unique.
